of bands as part of any political or legal system; they were members of households as part of a domestic system. What held the unit together was the central position and dominance of the father or husband, and hence the life of a household was only as long as his lifetime. When he died, the household broke up and the surviving members joined other households, perhaps in the same district, perhaps in some other band territory. Such change of household was carried out by the individuals concerned, not quite at will, but certainly not with sufficient uniformity for any political or legal label to be put upon it.

Uniformity was derived from the fact that every Tiwi had to live in a household. The universal prohibition on unmarried females was obviously one expression of that requirement. For men, the requirement was less firm, and if a young man wanted to live entirely alone he was free to try—although there is no record of any man having tried it for more than a few weeks at a time. Even if his mother were dead and his father or step-father did not welcome him, he attached himself to some household since, apart from any question of loneliness, this was the only way by which he could eat regularly. For Tiwi households were primarily autonomous food-producing and food-consumption units. A household made its own decisions, camped where it saw fit to camp, moved on when the food quest made it advantageous or necessary to move on. A large household, such as that of Ki-in-kumi or any other big man, was a complete community in itself, with the old man as executive director. He laid down the daily, weekly, and monthly work and travel schedules for the women, the young men, and the children. Most of the time the work went automatically because all the adults and the older children knew their jobs.

Daily Activities

By shortly after dawn each day, the household was up, and after a light breakfast, usually of leftovers from the previous night, everybody left camp to go to work. The women and children (except perhaps the five- to ten-year-old boys, who were rather useless at that age) scattered in every direction from the camp with baskets and/or babies on their backs, to spend the day gathering food, chiefly vegetable foods, grubs, worms, and anything else edible. Since they had spent their lives doing it, the old women knew all about gathering and preparing vegetable foods, and they supervised the younger women. This was one important reason for men marrying widows, and even a man with many young wives was quite likely to remarry an elderly widow or two nonetheless. A husband with only young wives might have a satisfactory sex life, but he still needed a household manager if he wished to eat well. The supervision of the female members of the household was left to the old women and, provided the returns were good, the husband did not attempt to interfere nor to give orders concerning the details of women's work.

After the women had scattered out in a wide circuit from the camp, the husband might hunt, but only if he were not too old. In hunting kanga-

roos,[3] wildfowl, and other game, keen eyesight is essential, hence Tiwi men did very little hunting once they were past about forty-five, though they hated to admit their hunting days were over. The meat, fish, and game provided for the large household of an old man was obtained by the young men, and this was about the only thing an old man thought his sons or his step-sons were good for. Typically the young man, when he returned at nightfall with a kangaroo which he had spent most of the day tracking down and spearing, would ignore the old man and dump the carcass at the feet of his mother as if to say, "I brought this back for you, not for that old So and So."

As the women straggled back to camp toward sundown with the results of their day's gathering and the young hunters brought in their bags, cooking began and the main meal of the day (usually the only hot meal) was eaten. The Tiwi themselves had no doubt about the close relationship between plural marriage and good eating. "If I had only one or two wives I would starve," the head of a large household once told the missionary who was preaching against plural marriage, "but with my present ten or twelve wives I can send them out in all directions in the morning and at least two or three of them are likely to bring something back with them at the end of the day, and then we can all eat." This was a realistic appraisal of the economic situation and it is to be noted that he put the emphasis on the food obtained by the women gatherers rather than that supplied by the male hunters. Based on the observations of 1928-29, it would appear that the Tiwi ate pretty well, especially in the larger households. Kangaroo and other marsupials, and some of the larger lizards (for example, the goanna) were very plentiful in the bush, as were fish and turtles and dugong on the coasts and wild geese in many districts. But all these were extras or dividends; the staple everyday foods were the vegetable foods gathered day after day in apparently unending quantities by the women. For most months of the year there was always plenty of *kwoka*, a porridgelike dish prepared by soaking and mashing the small nuts of a native palm. These nuts grew in such quantity that in every large camp baskets or dishes of *kwoka*, at various stages of preparation, were always available, even for midnight snacks if anybody woke up hungry. *Kwoka* was about as dull and tasteless as Scotch porridge, but equally filling, and naked small boys full of *kwoka* had stomachs distended like balloons. In the wet season the place of *kwoka* was taken by *kolema*, a yam whose ripening and growing season was much shorter than that of the nuts from which *kwoka* was made. It was on the abundance of the *kolema* yams during January and February that the Tiwi supported the more elaborate of their collective ceremonials.

The abundance of these and other vegetable foods, plus the ample supply of game and fish in many places, meant that under aboriginal conditions the Tiwi lived at a food-consumption level much further above the near-

[3] Actually there are no kangaroos on Melville and Bathurst Islands; the chief meat animal is a slightly smaller species of marsupial technically called the wallaby. As the distinction is important only to zoologists, and as many of the so-called kangaroos in American zoos are in fact wallabies, we prefer to use the more familiar word.

special rare ceremonial occasions, because of the poverty of the food supply. The prevalence of such large camps among the Tiwi supports our general thesis that their native food supply was, for Australia, unusually plentiful, and that, in this sense, the Tiwi were a "rich" Australian tribe.

When camped together thus, the various households kept their distance, with the main fires and shelters of each separated by some twenty or thirty yards from the others, and during the day when everybody (except the old men) was out food collecting, the camps were almost deserted. When the food gatherers returned in twos and threes in the late afternoon, each household would cook and eat at its own fires as a unit, but if they wished, members of the smaller households, in which food returns for the day were probably smaller per capita than those of the bigger households, would "drop in during supper" upon the latter and supplement their own slender meal. Such hospitality was always extended on an individual basis; some member of the bigger household, usually a senior wife, would offer to one of the visitors a piece of meat or a dish of *kwoka* and if rebuked by her husband she would justify her act by mentioning her own kin relationship to the visitor, as if to stress that the kindness was her own individual gesture and did not commit the whole household to friendliness. Heads of large households were, however, generally very permissive if such handouts were made by senior females of their household to women or children of other households; it was handouts to adult male outsiders, especially young male outsiders, that were likely to provoke snarls or reprimands from the old man. This was in line with the general hostility of all old men to all young unmarried men that ran through all aspects of Tiwi culture.

After darkness fell, such a camp, with three or four households all resting within easy hearing distance of each other, became highly animated with men visiting from fire to fire as the women, who were not encouraged to walk about after dark, gossiped around their own fires. Little productive work could be done after dark, though a few cooking chores and food-preparation activities were performed, and most people went to sleep early unless the shouted conversations from fire to fire earlier in the evening had started an argument. If an argument did arise, the participants might go on abusing each other at long range for hours, with many of the listeners becoming involved and the rest remaining awake to enjoy the row.

Such rows were almost invariably outgrowths of the constant suspicion with which older men regarded younger men. This suspicion was in turn part of the price the Tiwi had to pay for the efficient type of food-production unit that they had evolved. This production unit, to reach maximum economic efficiency, required the vast majority of all females to be concentrated in the households of a very small number of husbands; namely, the very oldest men. As a necessary correlate, men under twenty-eight had no wives at all and very few men under forty had any wife except elderly and physically very unattractive widows. The efficient economic organization thus obviously created a moral and social problem—the problem of how to keep the unmarried young men away from the young women. The old head of the household had a double role:

773 However, before all these changes took place, *Tukimbini* assembled the mythical people who had attended *Purukupali's* ceremony, and taught them the rules of behaviour, and the laws of marriage and tribal relationship they must always obey. *Tukimbini* also laid down the periods of light and darkness that still determine the daily cycle of aboriginal life.

512 821 [825] When the first light appears in the morning sky it is the melodious call of *Tukimbini*, now the yellow-faced honey-eater (*Meliphaga chrysops*) that wakens the aborigines from their sleep.

The sun-woman, rising above the eastern horizon with her blazing torch, is a signal for the aboriginal men, with spears and wooden clubs, to go hunting, and for the women, with bark baskets hanging from the sticks over their shoulders, to gather their food from the forest and the swamp-lands.

About mid-day, the sun-woman, cooking the food she has gathered, makes the heat of the day unbearable. The aborigines then retire to the shade of the trees until the late afternoon when they continue their food gathering, returning to camp to cook their evening meal just as the sun-woman sinks below the western horizon.

Soon, darkness creeps across the sky, the stars, *tapalinga*, show themselves and the men of the Milky Way, the *Maludaianini*, span the heavens. It is then that the dried perspiration which the *Maludaianini* rub from their bodies, [512] falls on the eyelids of the aborigines, making them so heavy that they cannot keep awake. Next morning, at dawn, *Tukimbini* wakes the aborigines to a new day.

776 778 The following is the list of the totemic places of Melville and Bathurst Islands, illustrated by bark paintings, the names of the totemic people and their relationships to each other.

Locality	*Totem*	*Relationship*
Murupianga	Tukimbini (bird)	Great-grandson of *Mudungkala*
Wuriupi	Garagalani (turtle)	Not known
	Wuriupranala (sun)	Daughter of *Mudungkala*
Panindu	Paninduela (eucalyptus tree)	Wife of *Tukimbini*
Wailu	Andjalui (fresh water)	Husband of *Wuriupranala*
	Kwouk-kwouk (frog)	Not known

settlement work. It seemed the chief advantage was that they received 'money-in-the-finger' from the skins they caught. They didn't understand why they didn't also get paid for the settlement work. I kept silent, but soon they turned to me and said, "You get job; how much you pay?" I told them, and then went on to say that out of that salary I had to pay someone for the food I ate, the clothes I wore, the house I lived in and so on, whereas they did not have to pay for the flour, tea, sugar, meat, blankets, or clothes the welfare people gave them. There was a long silence during which, I believe, each man was figuring how much all these benefits were worth in hard money. Finally Ginger said slowly, "Maybe, this way more better."

123 465 521

Soon the visitors rose and returned to their fires. Someone started a song, a low nasal chant. Another, a woman, began a high-pitched love song, and to this discordant lullaby I soon fell asleep.

123 533

As usual, it was barely light when the camp came to life again. After the customary tea breakfast, the various families discussed among themselves the day's plans. Black Joe and Long Peter, their wives and children, were taking the canoe up-river to hunt. Young Brook and his brothers, Danny Brown and Charlie Cook, their wives and children, soon left to hunt in the area back of Minianapi. Charlie Quiet and Roger also left. "Now we go?" I turned in question to Albert. "No, we stay behind. Build house. No good you go bush. Too much grass, plenty big mob cheeky snake. By and by that mob burn grass; then we go bush." It seemed like a logical explanation, but I was disappointed.

123 512

The day was already sticky and muggy, and tired of inactivity I started off toward the creek, saying I was going for a swim. Both natives jumped up and said, "No. No. Too much crocodile, more better go along billabong." So with Agnes ahead we started down the path leading away from the creek. Soon we were out of the thick tangle of bushes separating the clearing from the true bush. Now the path led over the rocky, dusty ground, which had but recently been burned. The trunks of the large bloodwood and stringy-bark trees were blackened for about four feet up from their base. The spiraled trunks of the screwpalm, as well as their lower dried leaves, also had a charred appearance. Except for an occa-
